

SCHOLIVO

Smart School Management Platform

**Run your whole school from one system —
and give every parent a window into it.**

A proposal for your school · August 2026

WHAT WE'LL COVER

Four things, in about fifteen minutes

01 The problem

Where a school day quietly leaks time, money and goodwill.

02 The idea

One platform for staff, one app for families, one shared database.

03 The solutions

Eight everyday problems — and how Scholivo removes each one.

04 Getting started

What a rollout looks like, and the next step.

01

The problem

What running a school on registers, spreadsheets and paper slips really costs.

A NORMAL TUESDAY

The same day, repeated in most schools

- 8:10 am** Attendance is taken on paper. Two registers are already missing.
- 11:30 am** A parent phones the office: “Did my son come in today? And last week?”
- 1:00 pm** The accountant cross-checks fee receipts against a spreadsheet, by hand.
- 4:30 pm** A teacher leaves late — marks for two classes still to copy into a register.
- Next week** The head asks for this term's attendance and fee position. It takes two days.

Now multiply that by roughly 200 school days a year.

None of it shows up as a line item

Hours

of staff time every week, copying and cross-checking the same numbers.

Fees

lost as missed dues and untracked discounts, with no clear defaulter list.

Trust

eroded each time a parent must phone the office to find something out.

Delay

that turns a simple question from management into a two-day compilation.

02

The idea

Not another tool to log into. One platform that connects the work you already do.

One platform. Two front doors. One truth.

A web back-office for staff

Admissions, academics, attendance, exams, fees, accounting, library, transport, hostel and reports — all in one place.

A mobile app for families

Parents and students open an app and see attendance, marks, fees, timetable, homework and notices — no phone call needed.

One shared database

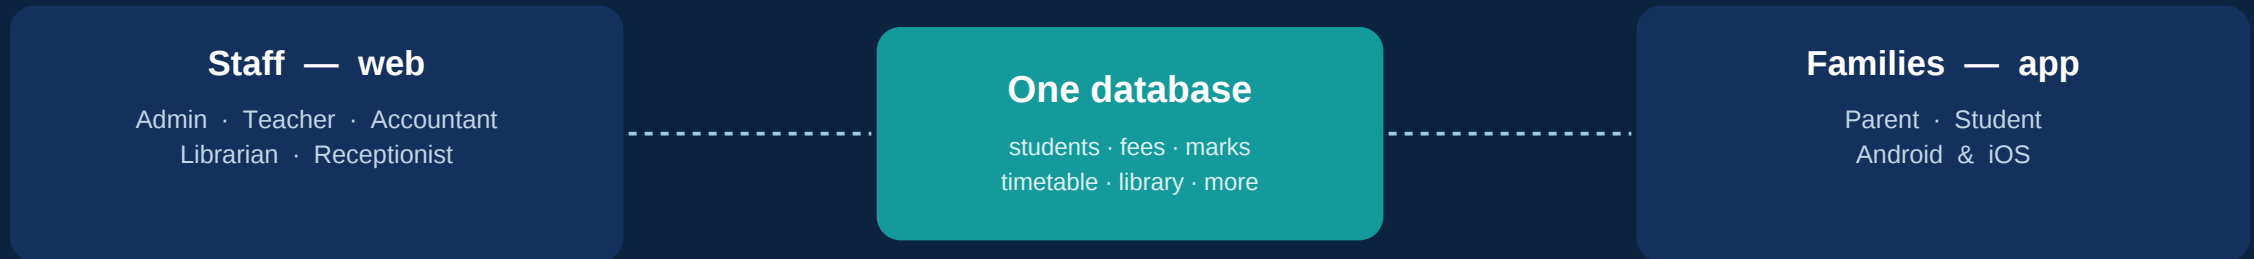

A mark entered in class, or a payment taken at the desk, is visible everywhere within seconds. No syncing, no re-typing.

Built for one school or many

A single installation can run several campuses, each with its own data, branding and switched-on modules.

HOW IT FITS TOGETHER

Everyone works in the same system

Multi-school: one platform can hold many campuses, kept completely separate.

03

The solutions

Eight everyday problems. One at a time — the problem, then exactly how Scholivo removes it.

One connected student record

THE PROBLEM TODAY

- Attendance, marks, fees and documents sit in separate books and files.
- Nothing reconciles; the same detail is written out several times.
- Seeing a student's full picture means visiting three people.

WITH SCHOLIVO

- Every student has one record — profile, guardians, documents, category, status.
- Attendance, marks and fees attach to it automatically.
- Custom fields capture anything specific to your school.

RESULT Any staff member sees a student's complete, current picture in one screen.

Parents informed — without a phone call

THE PROBLEM TODAY

- News travels on paper slips that never reach home.
- The office answers the same questions all day long.
- Parents hear about problems late, if at all.

WITH SCHOLIVO

- Parents open the app: attendance, marks, fees, timetable, homework, notices.
- Notices and announcements arrive as push notifications.
- One login covers every child in the family.

RESULT The front office stops being a call centre; parents trust what they can see.

Fees collected and tracked, to the rupee

THE PROBLEM TODAY

- Receipts are cross-checked against a spreadsheet by hand.
- Discounts are informal and hard to audit.
- There is no reliable list of who still owes what.

WITH SCHOLIVO

- Fee heads, groups and due dates set once, then assigned in bulk.
- Collection with part-payments, printed receipts and full history.
- Discount schemes are defined, assigned and recorded.

RESULT A live defaulter list and a clean fee position on any day of the term.

A timetable that builds itself

THE PROBLEM TODAY

- Days of manual work on a paper grid every term.
- One teacher change breaks the whole thing.
- Clashes surface only when a class is left waiting.

WITH SCHOLIVO

- The generator places every period against your constraints.
- Teacher and class availability, subject load and clashes all respected.
- Lock the periods you want, regenerate the rest, then publish.

RESULT A clash-free timetable in minutes — on staff, student and parent screens at once.

Exam results the same day

THE PROBLEM TODAY

- Marks are copied from scripts into registers, class by class.
- Totals, grades and ranks are worked out by hand.
- Report cards take days to assemble.

WITH SCHOLIVO

- One fast marks-entry screen per exam schedule.
- Grades, totals and pass/fail computed from your grading scale.
- Printable progress reports per student, per exam.

RESULT Teachers enter marks once; results and report cards come out automatically.

Teachers teaching, not filing

THE PROBLEM TODAY

- Attendance on paper, marks in registers, homework on the board.
- Lesson plans live in a personal diary.
- Online classes are shared over scattered chat messages.

WITH SCHOLIVO

- Attendance and marks in seconds from any device.
- Homework posted with attachments; students submit in the app.
- Lesson plans and live-class links scheduled in one place.

RESULT Less administration per teacher, every single day.

Decisions backed by real numbers

THE PROBLEM TODAY

- A simple question from management is a two-day compilation.
- Figures are chased from several people and rarely agree.
- By the time a report is ready, the moment has passed.

WITH SCHOLIVO

- Role dashboards show the live position the moment you log in.
- Ready reports: students, fees, library, exams, promotions.
- Filter by class, section, session or date, then print.

RESULT Management sees the real position on demand — not next week.

The right people see the right things

THE PROBLEM TODAY

- Everyone with a login can see almost everything.
- There is no clean record of who changed what.
- Data for one campus mixes with another.

WITH SCHOLIVO

- Eight roles with a permission matrix you edit per module and action.
- Rules enforced on every screen and every API call.
- Each school's data is isolated; the app uses token security.

RESULT Access matches responsibility — and your data stays yours.

AND EVERYTHING ELSE, INCLUDED

Switch on what you need, when you need it

- **Library**

Catalogue, members, issue and return, automatic overdue tracking.

- **Transport**

Routes, buses and stops; assign each student to a route and stop.

- **Hostel**

Hostels, rooms and beds, with occupancy tracking.

- **Accounting**

Income and expense heads; a running view of school finances.

- **Events & holidays**

A shared calendar of functions, events and holidays.

- **Downloads**

Share syllabus, forms and circulars with the right audience.

- **Messaging**

A private inbox between staff, parents and students.

- **Notice board**

Publish once; delivered everywhere with read-tracking.

04

Getting started

A short, guided path from first login to going live — with help moving your data.

LIVE IN A FEW WEEKS

Four steps, done with you

You are not doing this alone — Scholivo helps move your data and trains your team.

The short version

- One connected system, instead of many disconnected ones.
- Everything for staff on the web; everything for families on the phone.
- Automatic timetabling and fee tracking give hours back every week.
- Transparent communication builds parent trust and cuts front-office load.
- Turn modules on as you grow — pay only for what you use.
- Modern, standard technology you can host anywhere. No lock-in.

The next step

We load a slice of your real data — a few classes, some students, one fee head — and walk your team through it live. You decide with your own school in front of you.
